

Stump grinders

AHWI stump grinders are designed for professional and current operations, capable to cope with every kind and size of stump. As attachment for booms of excavators or cranes the stump grinder cuts easily on flanks of hills, banks, over walls or fences and in areas difficult to access.

Fixed hammers – excellent grinding performance and low costs.

The stump grinders are available PTO driven for tractors from 70 – 400 HP or as attachment with hydraulic drive.

Specifications

Model	Wheel diameter (mm)	Drive	Power class	Weight (kg)	Item
SF900	900	mech.	90-150 PS	1.300	A
SF1000	1.000	mech.	200-400 PS	1.950	A
SF1100	1.100	mech./hydr.	150-260 PS	3.200	A
SF600H	600	hydr.	60-100 l/min.	310	B
SF900H	900	hydr.	80-160 l/min.	730	B
SF1100H	1.100	hydr.	140-250 l/min.	1.380	B

(A) Attachment to carriers and tractors, PTO driven

(B) Attachment to excavatore or crane boom, hydraulic drive.

Options: Drive of rotor hydraulically or with mounted engine. Subject to change without notice. Weights vary depending to complete equipment.

Design features and benefits:

- Solid proven construction
- Special hammers, individually exchangeable
- Excellent cutting performance at radial and axial working method
- Very good view to the stump grinding operation
