

VIBRATING CONVEYORS FOR WOOD PROCESSING

MORE THAN JUST CONVEYING

Technically advanced vibrating conveyors are a tradition at General Kinematics. No matter how difficult your application, chances are we have solved a similar material flow problem -- not only for materials that need to be moved, but a number of processes along the way, including separating, screening, classification, distribution, sorting, inspection, and more. Travel can be up, down, or all around your facility with Syncro-Coil® vibrating conveyors.

FEATURES

- Syncro-Coil drive eliminates load dampening.
- Heavy-duty construction withstands overloading and impacts.
- Optional screening sections delivers cleaner product.
- Natural frequency design uses very little energy during operation.
- Conveyors can be designed to incline, decline, or go around corners.
